

REMARKS

The Examiner has objected to the drawings because of a poor quality of the photocopy and because reference numeral 18 has been used to designate two different elements in Figure 1. Applicant points out that formal drawings were submitted on March 8, 2002 and should appear in the file history. Applicant has received a return postcard indicating that the drawings were in fact received by the Patent and Trademark Office. A copy of the formal drawings, with modification, is attached for your convenience. A proposed correction to Figure 1 includes the removal of the erroneous designation "18". Applicant requested entry of the corrected drawing.

The specification was objected to because of a typographical error designating conductor 154 as 254. By the above amendments, this error has been rectified.

Claims 13-18 were rejected under 35 U.S.C 112, second paragraph. As noted by the Examiner, claim 13 contained a typographical error and should have been dependant upon claim 12. For other reasons, claim 13 has been incorporated into claim 11.

The Examiner has indicated that certain subject matter is allowable over the prior art of record. The claims have been amended to include some of this subject matter. For example, claim 1 includes a sensor system, comprising among other things a processing circuit in communication with the sensor to receive a signal of the biological indicator and to indicate a therapy to be delivered. Claim 11 is a system that includes, among other things a processing circuit to process sensor signals provided by the one or more activated sensors, wherein an output of the processing circuit is used to determine a therapy to be delivered. Finally, claim 19 is a method of sensing signals in a living body, comprising, among other things determining a therapy to be delivered to the living body based on the obtained signal from the sensor. None of the references alone or in combination teach or suggest the claims as currently amended.

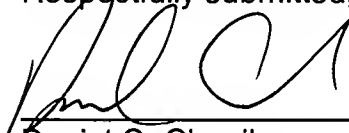

Applicant: John G. Keimer
Serial No.: 10/040,827
